

Xenexx Handset / Headset Switch S22

The Xenexx Handset/Headset Switch S22 is designed to switch between telephone handset and audio headset via the big switch on top of the device. Handset and headset can be connected via RJ9 plugs. To mute conversation for the other party simply press the round mute button on top of the Handset/Headset switch. Volume control on the side allows volume adjustment for all connected devices. A built-in 3.5mm connector lets you connect a recording device for later analysis and rehearsal of conversations.

The built-in slide switch on the other side of the device allows connecting to almost any telephone. The RJ9 port on the back allows connecting headsets from any manufacturer.

The Switch 22 is compatible with: any Headset with RJ9 plug, any Telephone via built-in slide switch, any recording device via built-in 3.5mm Jack
